

HOW TO ORDER

Gunnel Tanks

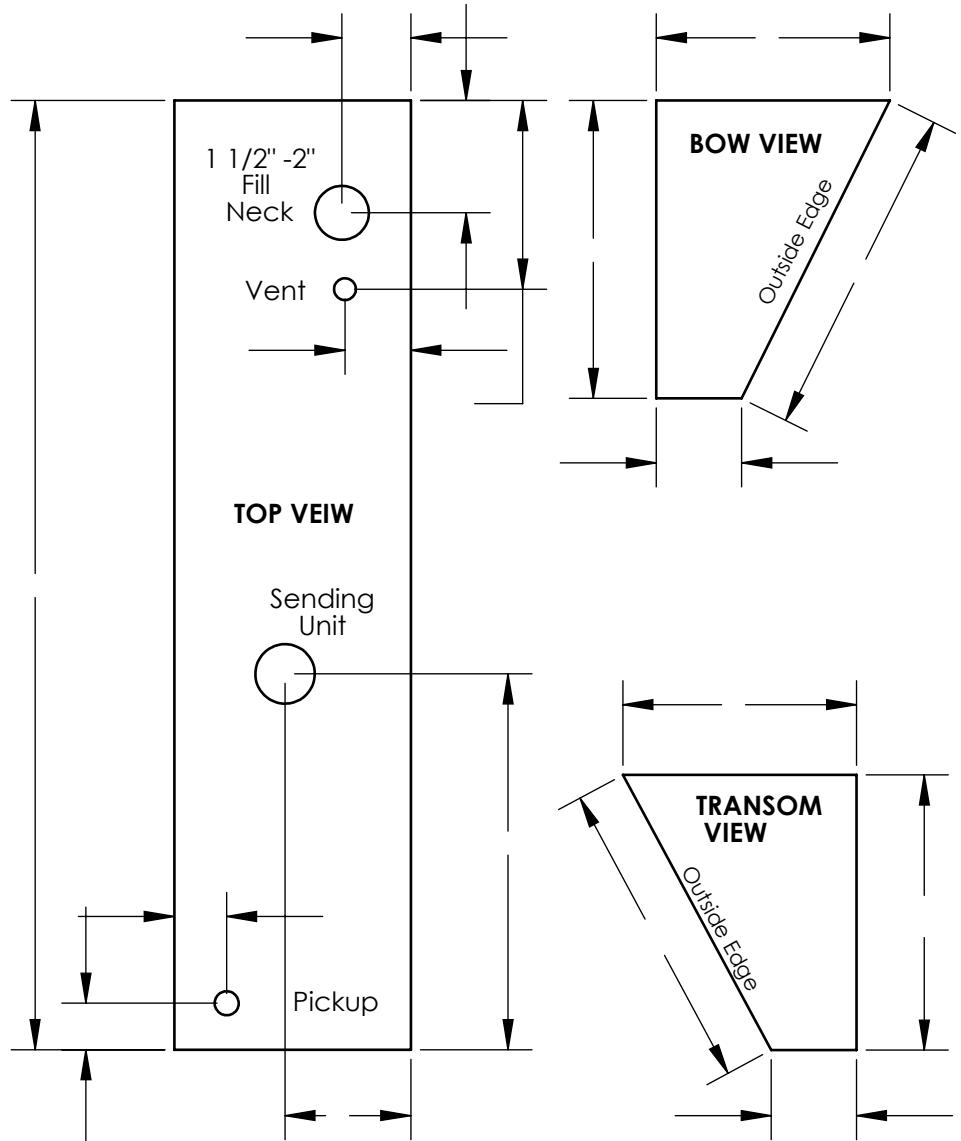

This diagram will assist you in ordering a Gunnel Tank. When measuring for all dimensions, allow 1/2" of clearance.

Step 1 (Top View): Measure length and width. Allow 1/2" of clearance for length and width.

Step 2 (Height of Tank): IMPORTANT: Allow 5" from gunnel to top of tank. This will allow room for fill neck on tank and fuel fill cap on deck.

Step 3 (Bow View): Measure height, width at top and width at bottom (in most cases, inside edge of tank should remain 90°).

Step 4 (Transom View): Measure height, width at top and width at bottom again. To double check your measurements, simply make a cardboard profile. This will assure your dimensions.

Please print this page and write in your dimensions; then mail or fax to IMCO.
